

#### SETUP & INIT

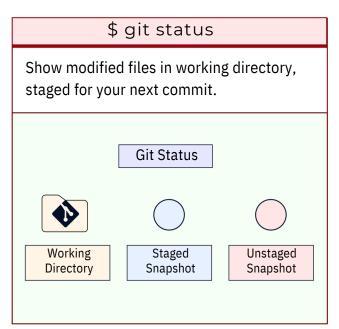

Configuring user information, initializing and cloning repositories.

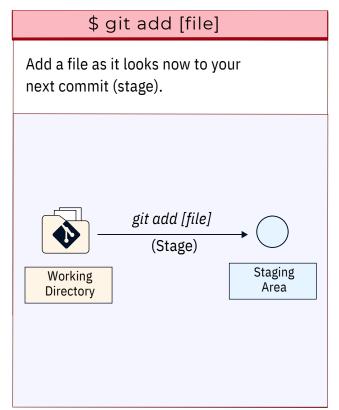

# \$ git init Initialize an existing directory as a Git repository. git init Normal Directory Git Repository

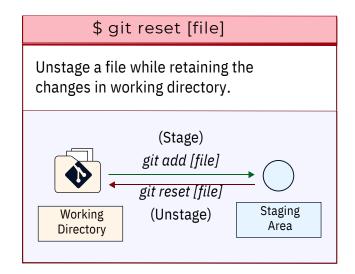

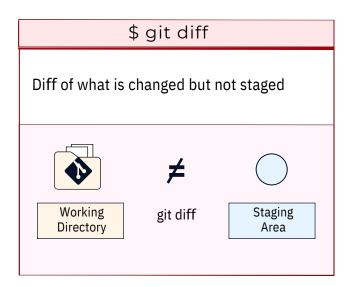

# STAGE & SNAPSHOT Working with snapshots and the Git staging area.

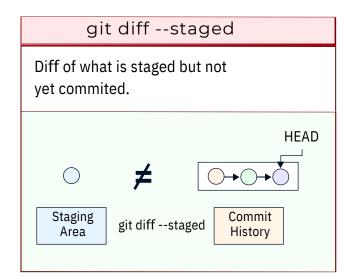

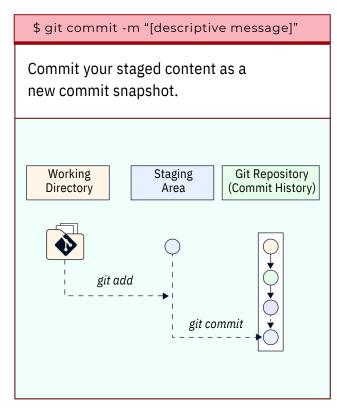

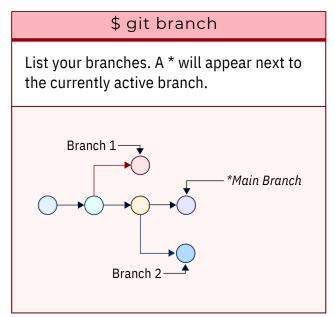

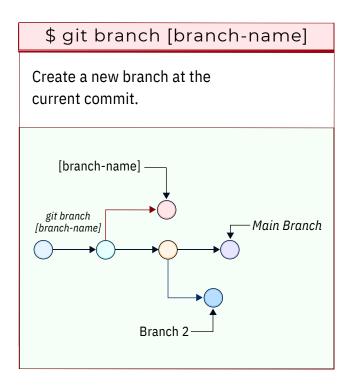

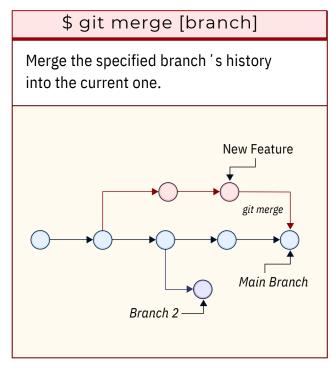

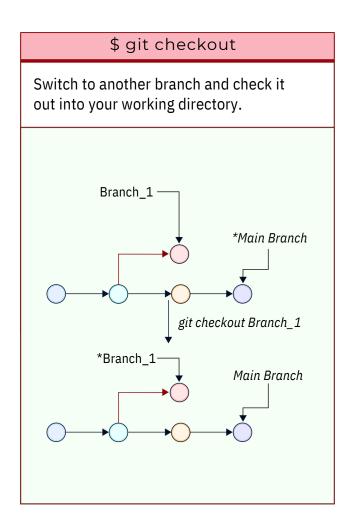

BRANCH & MERGE Isolating work in branches, changing context, and integrating changes.

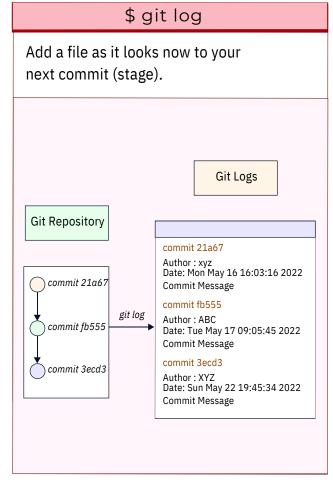

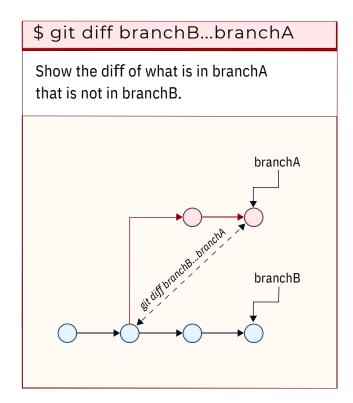

#### **INSPECT & COMPARE**

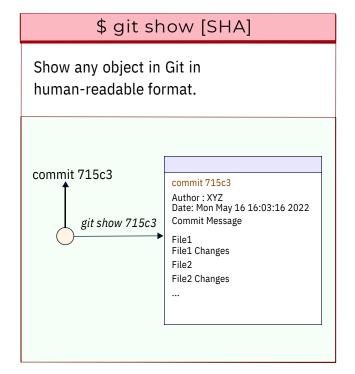

Configuring user information, initializing and cloning repositories.

### \$ git log branchB..branchA Show the commits on branchA that are not on branchB. Git Repository Git Logs Author: XYZ Date: Mon May 16 16:03:16 2022 Commit Message commit 181a9 git log branchB commit c7eaf branchA Author : ABC Date: Tue May 17 09:05:45 2022 commit c7eaf Commit Message branchB branchA

# \$ git log --follow [file]

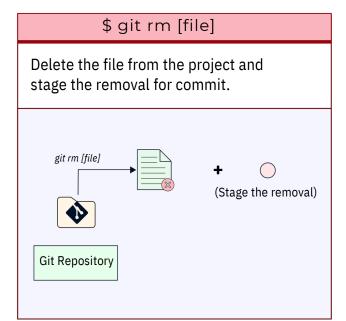

Show the commits that changed file, even across renames.

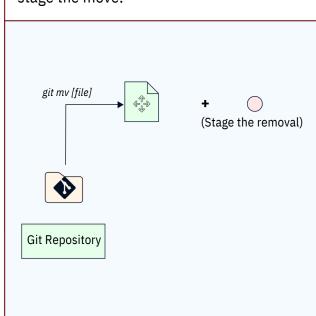

# TRACKING PATH CHANGES

Versioning file removes and path changes.

# \$ git mv [existing-path] [new-path]

Change an existing file path and stage the move.

#### \$ git log --stat -M

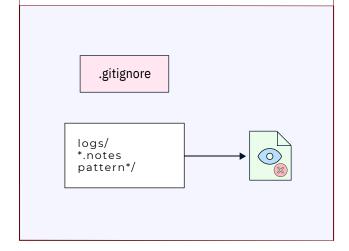

Show all commit logs with indication of any paths that moved.

## IGNORING PATTERNS

Preventing unintentional staging or commiting of files.

logs/
\*.notes
pattern\*/

Save a file with desired patterns as .gitignore with either direct string matches or wildcard globs.

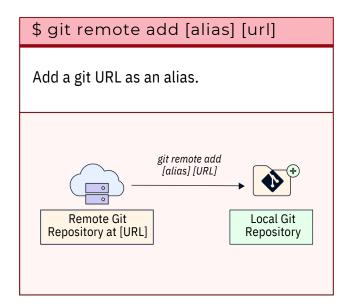

\$ git config --global core.excludesfile [file]

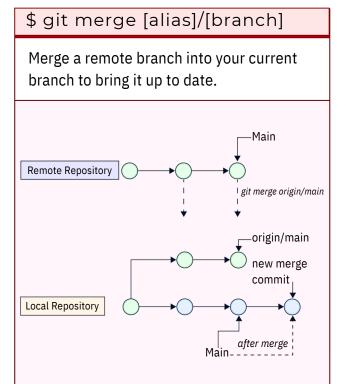

System wide ignore pattern for all local repositories

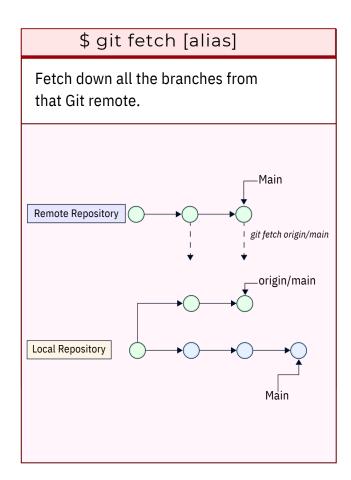

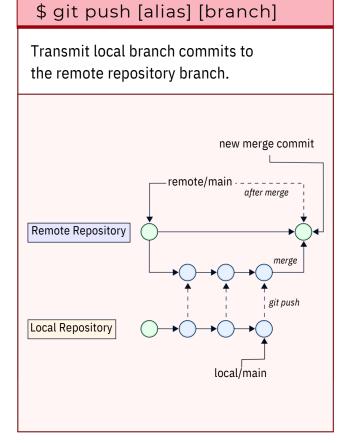

#### SHARE & UPDATE

Retrieving updates from another repository and updating local repos.

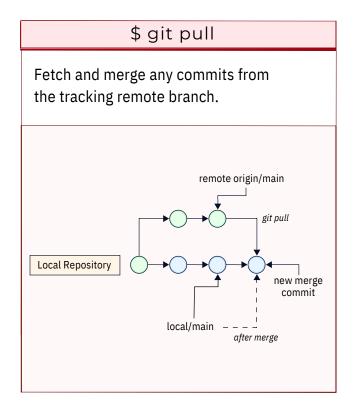

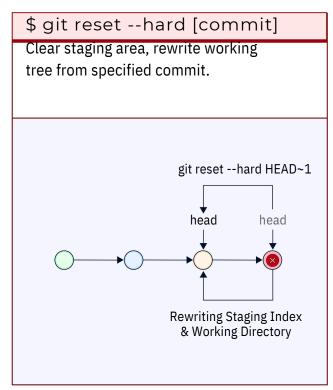

#### **REWRITE HISTORY**

Rewriting branches, updating commits and clearing history.

# \$ git rebase [branch] Apply any commits of the current branch ahead of specified one.

#### **TEMPORARY COMMITS**

Temporarily store modified, tracked files in order to change branches.
